Mr./Ms. «Owner\_Name»  
«Mail\_Address\_1»  
«Mail\_City», «Mail\_State» «Mail\_Zip»

Dear Mr./Ms. «Owner\_Name»,

This letter certifies that soils on the property at «Address\_1» in Denver, Colorado, have been remediated in accordance with the U.S. Environmental Protection Agency's (EPA) Record of Decision for the Vasquez Boulevard and Interstate 70 Superfund Site (VB/I-70), Operable Unit 1, signed by EPA on September 25, 2003. The required work was accomplished in accordance with EPA approved work plans. The remediation successfully addressed the health risks associated with exposure to arsenic and lead in soils at this property.

The clean-up action conducted by the EPA and the U.S. Army Corps of Engineers (USACE) addressed residences where the soil concentrations of lead and/or arsenic exceeded the action levels of 400 parts per million (ppm) and/or 70 ppm, respectively. The clean up consisted of excavation of the top 12 inches of soil at the listed property. The excavated area was replaced with clean soils.

In order to assure that your property remains protected from lead contamination, it may be necessary to maintain the exterior of your home to prevent any chipping or peeling paint from being deposited in your yard. Very old paint (from 1978 or before) could contain lead contaminants. An EPA representative will be contacting you to schedule a lead based paint assessment of the exterior of your home. EPA will provide for the initial abatement of lead based paint if necessary.

If you require more specific information concerning the clean-up of your property, please contact me at U.S. EPA (8EPR-SR), 999 18<sup>th</sup> Street, Suite 300, Denver, CO 80202-2466, Attn: Victor Ketellapper, or 303-312-6578, or Pat Courtney at 303-312-6631.

Sincerely,

Victor Ketellapper  
Project Manager
